Features

- High impact and wear resistance to friction with the work or metallic brush (sensing face/housing material: stainless steel)
- Reduced possibility of malfunction by aluminum scraps
- Prevent malfunction due to spatter with PTFE coating
- Excellent noise immunity with specialized sensor IC
- Built-in surge protection circuit and output short over current protection circuit
- Excellent visibility with a 360° ring type of indicator (red LED) (except for PRFAWT08 model)
- Equipped with the oil resistant cable
- Protection structure: IP67 (IEC standard)

Please read "Safety Considerations" in the instruction manual before using

The Characteristic of Spatter-Resistance Type

The hot arc from arc welding machine is adhesive even with metals or plastics.

Therefore, normal proximity sensor might have malfunction even though there are no sensing object if the arcs are put on the sensing surface. The arcs are not adhered on the sensing part of the spatter-resistance type proximity sensor as the part is coated with PTFE against thermal resistance.

Also, the protection cover sold optionally has the same function.

Durability Test

Highly resistant to the impact of removing welding sludge attached to the sensing face

Ocontinuous hitting test

Test conditions

Hitting object: 1.3kg of weight Hitting speed: 48 times per 1 min

The number of hitting times: 300 thousand times

Test model: PRFAW18

<Test result>

Metallic brush test

Test conditions

Testing object: stainless cup brush

Rotation speed: 80RPM Testing time: 3 hours Test model: PRFAW18

<Test result>

Electromagnetic Resistance Test

Large current from welding generates magnetic field which can affect the proximity sensor to malfunction due to noise. This product, however, can be used near strong noise without malfunctioning, thanks to excellent electromagnetic resistance. This test is conducted in the environment of welding.

Test conditions

Welding current: 13,000A

Installation direction: front and side

Test model: PRFAW Series

Diameter of sensing side	Minimum sensing distance between weld and sensor		
Installation direction	Front	Side	
8mm	60mm	70mm	
12mm	30mm	60mm	
18mm	10mm	50mm	
30mm	120mm	120mm	

*Minimum sensing distance can be different by welding environment

Effect of Aluminum Scraps

When aluminum scraps are attached or stacked at sensing side, the proximity sensor does not detect and sensing signal is OFF. However, the below cases may occur to sensing signal. In this case, remove the scraps.

(1) When the size of aluminum scraps (d) is bigger than 2/3 of the sensing side size (D)

(2) When aluminum scraps are attached on the sensing side by external pressure

Size	D (mm)
PRFAWT08	6
PRFAWT12	10
PRFAWT18	16
PRFAWT30	28

Cable ^{*3}		Ø4mm, 2-wire, 300mm, M12 connector	Ø5mm, 2-wire, 300mm, M12 connector			
		AWG22, core diameter: 0.08mm, no. of cores: 60, insulator diameter: Ø1.25mm				
Material		Case/Nut: Stainless steel 303 (SUS303, PTFE coated), Washer: Stainless steel 304 (SUS304), Sensing side: Stainless steel 303 (SUS303, PTFE coated, thickness is 0.8mm, in case of PRFAWT08 is 0.4mm), Oil resistant cable (gray): Oil resistant polyvinyl chloride (PVC)				
Approva	(0.7)					
Weight*	⁴ Approx. 80g (approx. 55g) Approx. 110g (approx. 83g) Approx. 132g (approx. 97g) Approx. 225g (approx. 170g					

- X1: Use accessories (nut, washer) made of SUS. Or, sensing distance cannot be guaranteed.
- ※3: Do not pull the Ø4mm cable with a tensile strength of 30N or over and the Ø5mm cable with a tensile strength of 50N or over. It may result in fire due to the broken wire. When extending wire, use AWG22 cable or over within 200m.
- ×4: The weight includes packaging. The weight in parenthesis is for unit only.
- XEnvironment resistance is rated at no freezing or condensation.

Proper Usage

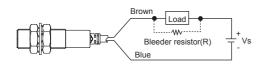

O Load connections

When using DC 2-wire type proximity sensor, the load must be connected, otherwise internal components may be damaged. The load can be connected to either wire.

O In case of the load current is small

• DC 2-wire type

$$R \le \frac{V_s}{lo-loff}(k\Omega)$$
 $P > \frac{V_s^2}{R}(W)$

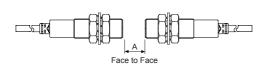

Us: Power supply, Io: Min. action current of proximity sensor, off: Return current of load, P: Number of Bleeder resistance watt

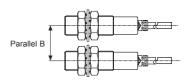

Please make the current on proximity sensor smaller than the return current of load by connecting a bleeder resistor in parallel.

XW value of Bleeder resistor should be bigger for proper heat dissipation.

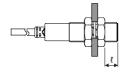

Mutual-interference & Influence by surrounding metals

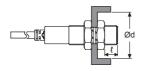

When several proximity sensors are mounted close to one another a malfunction of the may be caused due to mutual interference. Therefore, be sure to keep a minimum distance between the two sensors as below chart indicates.

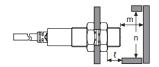

When sensors are mounted on metallic panel, it is required to protect the sensors from being affected by any metallic object except target. Therefore, be sure to provide a minimum distance as below chart indicates.
